2024-01-21

Abstract

Canada has the fifth-highest rate of gun fatalities in the world among high-income countries, and between 2008 and 2012, firearms caused more deaths in young men ages 18-24 than cancer, falls, drowning, and fires combined (Owens, 2019). Toronto Shooting Occurrences Data was obtained from the City of Toronto Open Data Portal and analyzed. The analysis shows that across the City of Toronto, shooting occurrences steadily increased in the six-year period from 2014 to 2019.
